Dear Hiring Manager,

I am a B.Tech Computer Science student at IIIT Raichur (2026) with hands-on experience in building real-world AI/ML systems, particularly in LLM-based applications, Retrieval-Augmented Generation (RAG), and scalable ML pipelines. Currently, as an AI Intern at Darwix AI, I am developing LLM-driven applications and automation workflows using AI agents, focusing on integrating embeddings, vector search, and prompt engineering for production-ready systems.

Previously, at IIT Madras (WSDSAI), I built a scalable Visual Place Recognition pipeline using deep learning and FAISS for efficient large-scale retrieval, along with optimization techniques like pruning and quantization. My projects further demonstrate strong practical exposure—developing an AI agent system (Empathy Engine) using RAG, building LLM-based persona generation systems, and applying LSTM models for time-series forecasting in environmental analysis.

My core strengths include Python, PyTorch, ML system design, vector search, and end-to-end pipeline development. I am particularly interested in building scalable AI systems that bridge research and real-world deployment. I am eager to contribute to impactful AI/ML projects while continuing to grow as an engineer.

Sincerely,
Manvendra Singh
